

Residential Parking Strategy

Additional Data/Research Needs from Jacqueline Hynes (7-22-09)

1. Options for effective enforcement. If stringent enforcement is accomplished, which of the identified problems would still remain?
2. Identify main ingress/egress routes. Determine necessary steps to make them safe and efficient.
3. Identify illegal encroachments (fences, walls, etc.) within road rights-of-way. We need this information to determine how and where it impacts circulation and in order to begin abatement process. (acknowledge problems re: center lines etc. Not always possible. But at least identify most egregious examples).
